VOLUME 23

AUS, H. M.: An interactive quantitative microscopy system for a biomedical institute, (Abstract) 272

BABIN, Rosalie, M.: see Hebert, Jacques, J., 139

BARCLAY, G. A.: New medical application of automatic image analysis, (Abstract) 273

BAYARD, M. A.: Applications of the ion probe microanalyzer, (Abstract) 269

BAYARD, M. A.: see Fiedler, Inge, (Abstract) 268

BESANT, C. B., *et al.*: Measurement of reaction rates in a fast reactor using solid-state track recorders, (Abstract) 261

BEXON, R., *et al.*: Quantitative assessment of aerosol holograms, (Abstract) 266

BISHOP, G. D.: see Bexon, R., (Abstract) 266

BOSECK, S.: Image structure measurements on phase contrast images in the light microscope, (Abstract) 270

BRYANT, W. M. D.: Accessory techniques for particle identification in polarized light microscopy, 21

BRYANT; W. M. D.: Some interesting crystals, (Abstract) 267

CHAMBERLAIN, V. M., *et al.*: The design and application of a new multidisciplinary automatic image analyser, (Abstract) 273

CHARSLEY, E. L., *et al.*: The application of hot stage microscopy to the study of pyrotechnic systems, 227

CHESCOE, Dawn.: X-ray analysis on Corinth electron microscopes, (Abstract) 270

COBBOLD, A. J.: The use of a specimen capsule for the SEM metallisation and examination of air and electron beam sensitive Ziegler-Natta catalyst materials, (Abstract) 269

DAVIDSON, J. A.: Pressure cells for optical microscopy, 61

DODD, J., *et al.*: A schlieren eyepiece, 89

ELLIS, S. G., *et al.*: High resolution transmitted light phase microscopy of unmounted specimens, 127

EYLON, D.: Crack path-microstructure relationship observations in titanium alloys, 133

FEINERMANN, E.: Stereology of leucocytes from lymphoblastic leukemic patients, (Abstract) 274

FIEDLER, Inge, *et al.*: Dating of varnishes and media, (Abstract) 268

FLINT, Olga: Histochemical methods as an aid in food product morphology, (Abstract) 265

FRASER, D. J.: Spherulite content and distribution in polypropylene filaments, 145

FRASER, P. V.: New operator interactive light pen system for editing images to be measured by Quantimet image analysing computers, (Abstract) 273

GIBBS, J. I.: see Bexon, R., (Abstract) 266

GROSS, L.: see Hoffman, R., (Abstract) 264

Subject Index

VOLUME 23

IIMC, practical aspects of counting asbestos, 93
American microscopes, a short history, 165
Asbestos, automatic fiber counting, 93
Automatic image analysis, see Image analysis

Birefringence in fibers, 35

Cellulose fibrils, electron microscopy, 139
Cement types, use of petrographic microscope, (Abstract) 267
Crack path in microstructure relationship observations in titanium alloys, 133
Crystallography,
  chalcomycin I, 15
  m-nitrobenzoic acid, 1
  organic compounds, (Abstract) 267

Digital image processing for the SEM, (Abstract) 263
Dispersion staining,
  a new objective, 221
  refractive index measurement, 213

Electron microscope microanalysis applied in pathological conditions for particle identification, (Abstract) 263
Electron microscopy of cellulose fibrils, 139
Electron microscopy, x-ray analysis on Corinth range, (Abstract) 270
Eyepiece, schlieren, 89

Fibers, birefringence measurement, 35
Food product morphology, histochemical methods, (Abstract) 265

Histochemical methods in food product morphology, (Abstract) 265
History of the American microscope, 165
Holograms, quantitative assessment of aerosols, (Abstract) 266
Hot stage microscopy of pyrotechnic systems, 227
Hot stage, pressure cell, (Abstract) 265
Hot wire stage and its applications, 177

Image analysis,
  characterisation of particles by size and shape, (Abstract) 272
  measurement of reaction rates in a fast reactor by track counting, (Abstract) 261
  new medical applications, (Abstract) 273
  new multi-disciplinary analyser, (Abstract) 274
  new techniques for describing features, (Abstract) 271
  Omnicon pattern analysis system, 239
  operator interactive light pen system for editing images, (Abstract) 273
  practical aspects of asbestos fiber counting, 93
  quantification of microstructure in materials, (Abstract) 271
  quantitative microscopy system for a bio-medical institute, (Abstract) 272
  stereology of leucocytes, (Abstract) 274
  stereometry, (Abstract) 271
  two-dimensional image amendment, (Abstract) 272
Image structure measurements on phase contrast images, (Abstract) 270
Interferometry in polymer microscopy, (Abstract) 270
Ion microprobe, applications, (Abstract) 269

Liquid crystals, smectic, (Abstract) 266
Leucocytes, stereology, (Abstract) 274

Magnetic rheometer, (Abstract) 265
Microhardness measurement in mineral identification, (Abstract) 262
Micro-rheometer, (Abstract) 265
Microscopically measurable parameter for polymeric film characterisation, 157
Microstructural features, shape parameters, (Abstract) 261
Microstructure of materials, quantification by image analysis, (Abstract) 271
Mineral identification, reflectance and microhardness measurement, (Abstract) 262
Modulation contrast microscope, (Abstract) 274
Multiple beam interferometry in polymer microscopy, (Abstract) 270

Omnicon pattern analysis system, 239
Optical and crystallographic properties of m-nitrobenzoic acid, 1

Particle identification,
  accessory techniques in polarised light microscopy, 21
  electron microscope microanalyses in pathological conditions, (Abstract) 263
  image analysis of size and shape, (Abstract) 272
Petrographic microscope for identification of cement types, (Abstract) 267
Phase microscopy of unmounted specimens, 127
Phonograph records, wear characteristics, 55
Polarising microscope, accessory techniques for particle identification, 21
Polymeric film characterisations, a microscopically measurable parameter, 157
Polypropylene, spherulite content and distribution, 145
Pressure cells for optical microscope, 61
Pressure hot stage, (Abstract) 265
Pyrotechnic systems, hot stage microscopy, 227

Quantitative analysis of particles, specimen preparation problems, (Abstract) 267
Quantitative assessment of aerosol holograms, (Abstract) 266
Quantitative reflectance and microhardness measurements in mineral identification, (Abstract) 262
Quantitative scanning electron microscopy, 47
Quantitative shape parameters for microstructural features, (Abstract) 261

Reflectance and microhardness measurement, (Abstract) 262
Refractive index measurement by dispersion staining, 213
Rice straw, scanning electron microscopy, 37

Sausage casings, microscopic structure, 103
Scanning electron microscopy,
  fracturing of sand grains, (Abstract) 268
  on-line digital image processing, (Abstract) 263
  quantitative, 47
  rice straw, 37
  specimen capsule for Ziegler-Natta catalysts, (Abstract) 269
Schlieren eyepieces, 89
Shape parameters for microstructural features, (Abstract) 261
Smectic mesophases, (Abstract) 266
Spherulite content and distributions in polypropylene, 145
Stereology of leucocytes, (Abstract) 274

Titanium alloys, crack path-microstructure relationship observations, 133
Track counting, measurement of reaction rates, (Abstract) 261
Transmitted light phase microscopy of unmounted specimens, 127

Varnishes and media, dating, (Abstract) 268

Wear characteristics of phonograph records, 55

X-ray analysis on Corinth electron microscopes, (Abstract) 270
